### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose, teach or suggest directly, or indirectly the following limitations in combinations with other limitations of the claims, as follows:

As recited by claim 1,  
ascertaining by the network device one or more threshold values corresponding to one or more trigger events and the detected speed of the network device from a profile configured at the network device, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to a different set of one or more speeds of a plurality of speeds;

ascertaining by the network device one or more trigger values associated with the one or more trigger events; and  
triggering roaming of the network device when one of the trigger values associated with one of the trigger events is equal to or exceeds one of the threshold values that correspond to the one of the trigger events and the detected speed of the network device; wherein the threshold values include at least one of maximum data retry count, maximum number of beacons missed, or maximum data rate shift, wherein the threshold values do not include one or more speeds;  
wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 10,

ascertaining by the network device one or more threshold values corresponding to one or more trigger events and the detected speed of the network device from a profile configured at the network device, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to but does not include a different set of one or more speeds of a plurality of speeds, wherein the threshold values include minimum signal strength and wherein the trigger events include signal strength;  
ascertaining by the network device one or more trigger values associated with the one or more trigger events such that a signal strength is ascertained; and

triggering roaming of the network device when the ascertained signal strength is less than the minimum signal strength threshold value, the minimum signal strength threshold value corresponding to the detected speed of the network device;  
wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 32,

instructions for ascertaining one or more threshold values corresponding to one or more trigger events and the detected speed of the network device from a profile configured at the network device, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to but does not include a different set of one or more speeds of a plurality of speeds;

instructions for ascertaining one or more trigger values associated with the one or more trigger events; and

instructions for triggering roaming when one of the trigger values associated with one of the trigger events is equal to or exceeds one of the threshold values that correspond to the one of the trigger events and the detected speed of the network device;

wherein the threshold values include at least one of maximum data retry count, maximum number of beacons missed, or maximum data rate shift~

wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 33,

means for ascertaining one or more threshold values corresponding to one or more trigger events and the detected speed of the apparatus from a profile configured at the apparatus, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to a different set of one or more speeds of a plurality of speeds; means for ascertaining one or more trigger values associated with the one or more trigger events; and means for triggering roaming when one of the trigger values associated with one of the trigger events is equal to or exceeds one of the threshold values that correspond to the one of the trigger events and the detected speed of the apparatus; wherein the threshold values include at least one of maximum data retry count, maximum number of beacons missed, or maximum data rate shift, wherein the threshold values do not include; wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 34,

ascertaining one or more threshold values corresponding to one or more trigger events and the detected speed of the apparatus from a profile configured at the apparatus, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to but does not include a different set of one or more speeds of a plurality of speeds;

ascertaining one or more trigger values associated with the one or more trigger events; and  
triggering roaming when one of the trigger values associated with one of the trigger events is equal to or exceeds one of the threshold values that correspond to the one of the trigger events and the detected speed of the apparatus;  
wherein the threshold values include at least one of maximum data retry count, maximum number of beacons missed, or maximum data rate shift;  
wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 37,  
obtaining one or more threshold values corresponding to the detected speed of the network device from a profile configured at the network device, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values, wherein each of the plurality of sets of threshold values corresponds to a different set of one or more speeds of a plurality of speeds;  
ascertaining one or more trigger values associated with one or more trigger events; and  
triggering roaming when one of the trigger values associated with one of the trigger events is equal to or exceeds one of the threshold values that correspond to the one of the detected speeds of the network device;

wherein the threshold values include at least one of maximum data retry count, maximum number of beacons missed, or maximum data rate shift, wherein the threshold values do not include one or more speeds;  
wherein the network device is a Mobile Node supporting Mobile IP.

As recited by claim 38,  
ascertaining by the network device one or more threshold values corresponding to one or more trigger events and the detected speed of the network device from a profile configured at the network device, wherein the profile includes a plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to a different set of one or more speeds of a plurality of speeds, wherein the threshold values include minimum signal strength and wherein the trigger events include signal strength, and wherein the threshold values do not include one or more speeds;  
ascertaining by the network device one or more trigger values associated with the one or more trigger events such that a signal strength is ascertained; and  
triggering roaming of the network device when the ascertained signal strength is less than the minimum signal strength threshold value, the minimum signal strength threshold value corresponding to the detected speed of the network device;  
wherein the network device is a Mobile Node supporting Mobile IP.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
